

Quiz 2

Rewrite the following query to eliminate the nested subquery such that the group by operation is performed as early as possible.

```
SELECT cust#  
FROM    Customer c  
WHERE NOT EXISTS  
        (SELECT 1  
         FROM    Order o  
         WHERE    c.cust# = o.cust#  
         AND      o.date = '01-01-2013')
```
